

Task 1 - Perform a One-Time Full Backup

Steps:

- Open Server Manager.
- Go to Tools
 - Windows Server Backup.
- Click Local Backup.
- Select Backup Once....
- Choose Different options.
- Select Full Server (or Custom and choose the C: drive if your instructor specifically requires only C:).
- Choose the backup destination (another drive or external disk).
- Click Backup.
- Wait until the backup completes successfully.

Task 2 - Configure a Scheduled Incremental Backup

Steps:

- In Windows Server Backup, click Backup Schedule.
- Select Custom.
- Add the folder:
 - D:\Media
- Schedule the backup:
 - Daily
 - Time: 8:00 PM
- Choose the backup destination.
- Finish the wizard.

Task 3 - Comparison Table

Assume:

- Initial folder size = 10 GB
- Daily data change = 1 GB
- Backup period = 7 days

Feature	Full Backup	Incremental Backup	Differential Backup
---------	-------------	--------------------	---------------------

First Backup	10 GB	10 GB	10 GB
Daily Backup Size	10 GB	1 GB	1 GB, 2 GB, 3 GB...
Total Storage (7 days)	70 GB	16 GB	31 GB
Backup Time	Long	Short	Medium
Restore Time	Fast	Slow (need full + all incrementals)	Medium (need full + latest differential)
Storage Usage	Highest	Lowest	Medium

Task 4 - Backup Best Practices for a Flipkart-Style E-Commerce Website

- Schedule Automatic Daily Backups
 - Ensures customer orders, product data, and transaction records are backed up regularly.
 - Reduces the risk of losing recent data.
- Store Backups in Multiple Locations
 - Keep copies on a local backup drive and an off-site/cloud location.
 - Protects against hardware failure, theft, ransomware, or disasters.
- Regularly Test Backup Restoration
 - Periodically restore backups in a test environment.
 - Confirms backups are usable and reduces downtime during an actual recovery.
