

## Task 1 - Install AD CS

- Open Server Manager.
- Click Manage
  - Add Roles and Features.
- Select Role-based or feature-based installation.
- Choose your Windows Server.
- Select Active Directory Certificate Services.
- Under Role Services, select Certification Authority only.
- Click Install.

## Task 2 - Configure a Standalone Root CA

- Click the notification flag in Server Manager.
- Select Configure Active Directory Certificate Services.
- Choose Certification Authority.
- Select Standalone CA.
- Select Root CA.
- Create a new private key.
- Keep the default cryptographic settings.
- Set the CA Common Name to your favorite IPL team.
  - Example:
    - GujaratTitansRootCA
- Finish the configuration.

## Task 3 - Create a Certificate Template & Issue Certificate

- Open Certification Authority.
- Open Certificate Templates.
- Duplicate the Code Signing template.
- Rename it:
  - App Developers
- Publish the template.
- Request a certificate using the App Developers template.
- Approve the request (if pending).
- Export the certificate as:
  - AppDevelopers.cer

## Task 4 - Simulate a Zomato API Server Certificate

Create a CSR

Open IIS Manager:

- Select the server.
- Open Server Certificates.
- Click Create Certificate Request.

Use details like:

- Common Name: ZomatoAPI
- Organization: Zomato
- Country: IN

Save the CSR

Issue Certificate

- Open Certification Authority.
- Submit the CSR.
- Approve the request.
- Issue the certificate.
- Install the issued certificate back in IIS using Complete Certificate Request.

## Task 5 - PowerShell Script

Run PowerShell as Administrator.

- Import-Module ADCSAdministration
- Get-CertificationAuthority
- Get-IssuedRequest | Select-Object RequestID,RequesterName,CommonName,NotBefore,NotAfter

If Get-IssuedRequest isn't available, you can use:

- certutil -view
