

Task 1- Create Active Directory Domain

Create Domain

- Domain Name:
 - musicstream.local

Create 5 Users

Open Active Directory Users and Computers and create these users

- Username
 - admin
 - marketing
 - tech
 - support
 - hr

Task 2- Configure DNS & DHCP

DNS

- Open Server Manager.
- Install DNS Server.
- Verify the forward lookup zone for musicstream.local.

DHCP

- Install DHCP Server.
- Create a new IPv4 scope.
- Start IP: 192.168.1.100
- End IP: 192.168.1.200
- Subnet Mask: 255.255.255.0
- Gateway: 192.168.1.1
- DNS Server: Your Windows Server IP
- Authorize the DHCP server.
- Connect a client VM and verify it receives an IP automatically using:
 - ipconfig /all

Task 3- Shared Folder

- Create a folder:
 - C:\PlaylistShares
- Right-click → Properties → Sharing → Advanced Sharing.
- Share it as:
 - PlaylistShares

- Give Read/Write permission only to:
 - marketing
 - tech
- On the client computer, map the shared folder as a network drive.

Task 4- Create a GPO

Open Group Policy Management.

Password Policy

- Configure:
 - Password complexity: Enabled
 - Minimum password length: 8 characters
 - Maximum password age: 42 days

Disable USB Storage

- Create a GPO to disable USB storage for all users except **admin** by applying the GPO to the required users or OU and excluding the admin account.

Task 5- One-Page User Restore Guide

Restoring a Deleted User Account

- Open **Windows Server Backup**.
- Restore the latest **System State** backup if required.
- Open **Active Directory Users and Computers**.
- If the **Active Directory Recycle Bin** is enabled:
 - Open **Active Directory Administrative Center**.
 - Go to **Deleted Objects**.
 - Right-click the deleted user.
 - Click **Restore**.
- Verify the restored user can log in.
